

Tarceva

Good morning, I was diagnosed with lung cancer in 2012 had a removal of top left lobe of lung was stage 1A. 15 months later I was diagnosed with stage 4 adencarcinoma it had spread to both lungs lymph nodes and ribs. Started Tarceva 150 mg slight progression on a rib in 2014 which was treated successfully with radiation then continued on Tarceva to this day. Dosage is 100 mg due to side effects but I have been blessed with this treatment of Tarceva. But I was wondering do any of you actually get to completely stop Tarceva because sometimes I wonder if maybe I don't even need to take Tarceva! Would appreciate any comment especially from the medical field. Kind regards Ellie
